

WHAT IS CLAIMED IS:

1. An electronic device cradle organizer, comprising:

a base;

5 a plate adapted to be secured to a top portion of the base; and

wiring positioned within the base.

2. The organizer of claim 1 wherein the base is adapted to further hold one or more cradles.

10

3. The organizer of claim 2, wherein the plate is adapted to further secure the one or more cradles in a fixed and aligned position.

4. The organizer of claim 2, wherein each of the one or more cradles is
15 adapted to hold an electronic device.

5. The organizer of claim 2, wherein the wiring is adapted to couple to the one or more cradles.

20 6. The organizer of claim 1 further comprising at least one power supply housed within the base and coupled to the wiring.

7. The organizer of claim 6 further comprising at least one power adapter adapted to couple to the at least one power supply, wherein the adapter exits the base.

5 8. The organizer of claim 6 further comprising at least one data connection cable adapted to couple to the at least one power supply, wherein the cable exits the base.

9. The organizer of claim 1, wherein the plate is adapted to be sculpted in a plurality of at least one of a following form from a group consisting of:

10 shapes;

lengths;

widths;

heights; and

thickness, in order to accommodate a plurality of different manufacturers'

15 electronic devices.

10. The organizer of claim 1, wherein the base is adapted to be sculpted in a plurality of at least one of a following form from a group consisting of:

shapes;

lengths;

5 widths;

heights; and

thickness, in order to accommodate a plurality of different manufacturers' electronic devices.

10 11. The organizer of claim 1, wherein the electronic device is a Personal Digital Assistant.

12. The organizer of claim 1, wherein the electronic device is a mobile phone.

15 13. The organizer of claim 1, wherein the electronic device is a combination Personal Digital Assistant and mobile phone.

14. An electronic device cradle organizer, comprising:

a base adapted to hold a plurality of cradles;

a plate adapted to be positioned through a portion of the plurality of cradles and secured to a top portion of the base;

5 a power supply; and

wiring adapted to connect the power supply to the plurality of cradles, wherein the wiring is positioned within the base.

15. The organizer of claim 14 further comprising a plurality of cut-out

10 portions within the plate.

16. The organizer of claim 15, wherein electronic devices are adapted to be placed in the cradles through the cut-out portions.

15 17. The organizer of claim 14, wherein the plate is configurable.

18. The organizer of claim 14, wherein the plate is detachably attached to the base.

19. The organizer of claim 14, wherein the plate is adapted to receive electronic
20 devices from different manufacturers.

20. The organizer of claim 14, wherein the base is configurable.

21. The organizer of claim 14, wherein the base is adapted to accommodate various cradles from different manufacturers.

5

22. The organizer of claim 14, wherein the wiring may be voltage coded to match certain cradle requirements.

23. A method for organizing electronic devices, comprising:

10

placing a plurality of cradles on a base;

placing a detachably attached plate through a portion of the cradles and on to a top portion of the base; and

placing a plurality of electronic devices through the plate and on to the cradles.

15

24. The method of claim 23 further comprising providing power to the plurality of cradles via a single adapter.
